

## Project Description Component: Aquatic Habitat

\*- Acreages are in addition to acreages described for the Aquatic Habitat Component of the Stage 1 Project Description.

Feature	Description	Notes
In order to offset the adverse effects of the flow control structures in the South Delta contiguous expanses of tidal wetlands will be identified, protected, and increased in the Lower San Joaquin River and South Delta area through restoration and, where appropriate and acceptable to the fish and wildlife agencies, setback levees. These areas will be in addition to any targeted acreages in the ERPP.	1,000 ac of tidal emergent wetland.  500 ac of tidal perennial aquatic habitat.  50 ac of Shaded Riverine Aquatic Habitat.	
In the Western and Central Delta area contiguous expanses of tidal wetlands will be identified, protected, and increased through restoration. These areas will be in addition to any targeted acreages in the ERPP.	1,500 ac of tidal emergent wetland.  1,000 ac of tidal perennial aquatic habitat.  100 ac of Shaded Riverine Aquatic Habitat.
